DETAILED ACTION

- Response to the applicant's amendment dated 7/17/2006
- Amended claims 1-20 have been submitted for examination
- Amended claims 1-20 have been rejected

Specification

1. In view of the applicant-amended title, filed on 7/17/2006 all objections to the specification are withdrawn.

Drawings Objections

2. In view of the applicant amended drawing, figures 1-8, filed on 1/30/2006, all objections to the drawings are withdrawn.

Claim Rejections - 35 USC § 101

3. In view of the applicant-amended claim 20 filed on 7/17/2006 all objections to the claim 20 rejections under section 35 USC § 101 are withdrawn.

Claim Rejections - 35 USC § 112

4. In view of the applicant-amended claim 12 filed on 7/17/2006 all objections to the claim 12 rejections under section 35 USC § 112 are withdrawn.

Response to Arguments

5. Applicant's arguments, see pages 12-15, filed on 7/17 2006 have been fully considered but they are not persuasive.
6. In regard to claim 1, the examiner disagree with the applicant argument in page 13, line19-21 that Richardson Richardson teaching:

"Substituting the particular permutation matrix for an identity matrix does not constitute the claimed "performing at least one of a row permutation and a column permutation on an original check matrix. Richardson, therefore, fails to teach or suggest a decoding method that, for example, "obtain[s] a transformation check matrix by performing at least one of a row permutation and a column permutation on an original check matrix," as recited in amended independent claim 1."

The Examiner notes that it's well known in the linear mathematics algebra that the definition of Permutation Matrix is any matrix, **which can be created by rearranging (permuting) the rows and/or columns of an identity matrix.**

Copies of three (3) different sources that teach permutation matrix generation are attached with this office action:

- a. <http://planetmath.org/encyclopedia/permutationmatrix.html>
- b. http://en.wikipedia.org/wiki/permutation_matrix
- c. <http://mathworld.wolfram.com/permutationmatrix.html>

7. In regard to claim 6, the Examiner disagree with the applicant argument in page 14 that:

"Richardson fails to Richardson fails to disclose a decoding apparatus

Including, for example, "check node calculation means for simultaneously performing p check node computations" and "variable node calculation means for simultaneously performing p variable node computations," as recited in claim 6."

Art Unit: 2133

Actually Richardson teaches in col. 11, lines 13-16 that C/V decoder processing operation, to be performed in parallel:

"Since the decoding techniques of the present invention allow for a large number of decoding operations, e.g., constraint and/or variable node decoder processing operations, to be performed in parallel, the decoders of the present invention can be used to decode received words at high speeds."

The Examiner notes the parallel processing of C/V node computations as disclosed in Richardson ^{The} is same as in claim 6 disclosure of simultaneous [^] processing of C/V node computation.

8. The Examiner maintains the rejection of claims 1-20 under section 35 USC §102(b) as being anticipated by Richardson as in the office action filed on 4/17/2006.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will

Art Unit: 2133

the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
